Jeff Besos' Space Bubble i
Sagittarius A*
by Sterling D. Allan, 228033, Oly C4
Nov. 19, 2021

On Nov. 15, around 4:22^{am}, Gordon Deal of America's First News, announced that Jeff Besos (Amazon Founder, CEO) has come up with a concept of "floating [in space] bubbles, with forests and streams" for colonization in space, ^{the inhabitants} visiting Earth as a vacation spot.

Of course, that captured my attention as having strong parallels to my "Sky Venue" (SV) concept which I describe in my book, None to One: Evoking the Repentance Clause of Prophecy. Great minds think alike ☺ ≠

While we're on the subject of outer space, I should share something I noticed last night during a NOVA presentation (PBS, 7-2). They said that the ^{massive, stable} black hole at the center of our galaxy, 26k light years away is called "Sagittarius A*." With my Nov-30 birthday, that's my sign of the zodiac, and my last name starts with A. And "sterling" derives from "starling" from the star stamped ^{on} ancient coins. The narrative pronounced this "Sagittarius A star."

(Yes, I realize Besos is a New Yorker but I see him being friends with Gorbachev.)
